Getting Started with WordPress

Section One: Getting Ready...

You've heard everyone tell you that you ought to set up your new business site with WordPress. You vaguely know it has something to do with blogging – but what exactly is it?

WordPress actually refers to three separate entities

WordPress – A <i>content management system</i> (CMS) that allows you to copy-paste and/or easily format text to make it appear in the right places on your website. Saves you from having to learn HTML web coding and CSS data management. Used for sites or blogs.	WordPress.com – A <i>web-hosting company</i> created by the developers of the WordPress content management system. They treat this like a community and encourage you to host your blog as a sub-domain on WordPress.com for free.	WordPress.org – Separate from the hosting end of things, WordPress.org provides <i>support resources for WordPress users</i> . Here is where you will find free plugins, blog themes and more.
--	--	--

Only one of these three completely different WordPress types allows you to actually host a blog for free. That is WordPress.com. But should you host your blog there?

Web Hosting

It's not a good idea to create a free blog at WordPress.com if you're planning to monetize your blog content in any way (displaying ads, sending people to your sales page, including affiliate links and the like) – or even use it for business. For one thing, this is against WordPress.com's rules.

If you disregard these rules, you are quite likely to wake up one morning and find out your blog has disappeared off the face of the digital planet, without a word of explanation. And all your hard work has gone up in smoke for some violation that will never get explained.

Your best solution? **Host your WordPress blog on your own domain!** (Yes, you can absolutely use the WordPress CMS if you don't host your blog on WordPress.com.)

Choosing a Domain Name

Be sure, however, to choose a strong Domain name (either your own name, a catchy business name you want to brand, or an easy-to-pronounce-and-remember keyword and/or location based name; for example: "chicagocloggingclub.com"). (Yes, "ccc.com" would be shorter, catchier and easier to brand and remember – but that will only work if you want people *who already know that acronym* to find you.)

Getting Started with WordPress

Registering Your Domain Name

Here's another common area of confusion, for people who are new to running their own blog or site: Domain registration.

Your domain is your home on the net. For example, say your name is Ray Bandana: You might pay a web hosting company to host www.raybandana.com for you.

Your domain URL (address) sits on your web host's massive server computer. That is its home. But here's where people get a little confused: The person who registers your domain can either be your web hosting company (e.g. [BlueHost](#)) or *Hostgator*. We use HOSTGATOR

BUT! ** PLEASE GO TO THE LAST PAGE OF THIS MANUAL RIGHT NOW!**

[Read Hostgator vs. BlueHost](#)

You don't have to choose either of course: You can pick and choose any web hosting company. But whichever one you use, just make sure that the company is WordPress-friendly.

Whichever company you choose, make sure it has **cPanel** (a control panel), and supports **PHP**, **MySQL5** (or the latest version of MySQL) and **WordPress** and, finally, that it supports either **Fantastico DeLuxe** or **Simple Scripts**.

If you can't find the information you need on the sign-up page, look for a "Features" tab:

Bottom line: There are many types of web hosting companies and not all are ideal for blogging!

Unlimited Domains

If you are planning to host more than one website or blog for your business, do choose a web host that offers unlimited domains: It's better for internet searchability to have each URL (domain address; e.g. www.whateveryouwant.com) in its own separate domain, rather than as an "add-on" domain or "sub-domain".

If each site is in an entirely separate domain, it can also be transferred, should you ever decide to sell it. (Note: You will have to purchase (register) each new domain name as you add these either from BlueHost or from your chosen Domain registration company.)

Most reliable web hosting companies offer one free domain registration with your sign up, so there's no need for a separate registration: However, if your business model **includes multiple domains**, it will definitely be cheaper to register all your other domains with a company such as [Dynadot](#) that specializes in domain registration.

Getting Started with WordPress

A word of caution: Most domain registration companies will offer amazingly cheap web hosting (or even free web hosting). I would not recommend using your domain registration company for webhosting: Often your site will be laced with ads you don't know about or they provide poor support, obscure documentation or frequent "sit down" problems as well as bandwidth limitations.

(You really don't want to sign up and discover your new web host doesn't have a cPanel, doesn't support the MySQL databasing needed for WordPress, and wants you to upgrade to their \$179.95 per year plan because you've exceeded your 15mb bandwidth in the first week!)

By all means use Domain registration companies for **easy multiple and single domain registration** and **inexpensive domain transfers**, however.

Now let's get WordPress installed, and set up your blog!

Preparing to Install WordPress

There are many guides showing you how to set up WordPress using the Fantastico DeLuxe script, so we're going to do something a little different. We're going with Hostgator's quick install or [BlueHost](#), a company that uses *Simple Scripts*.

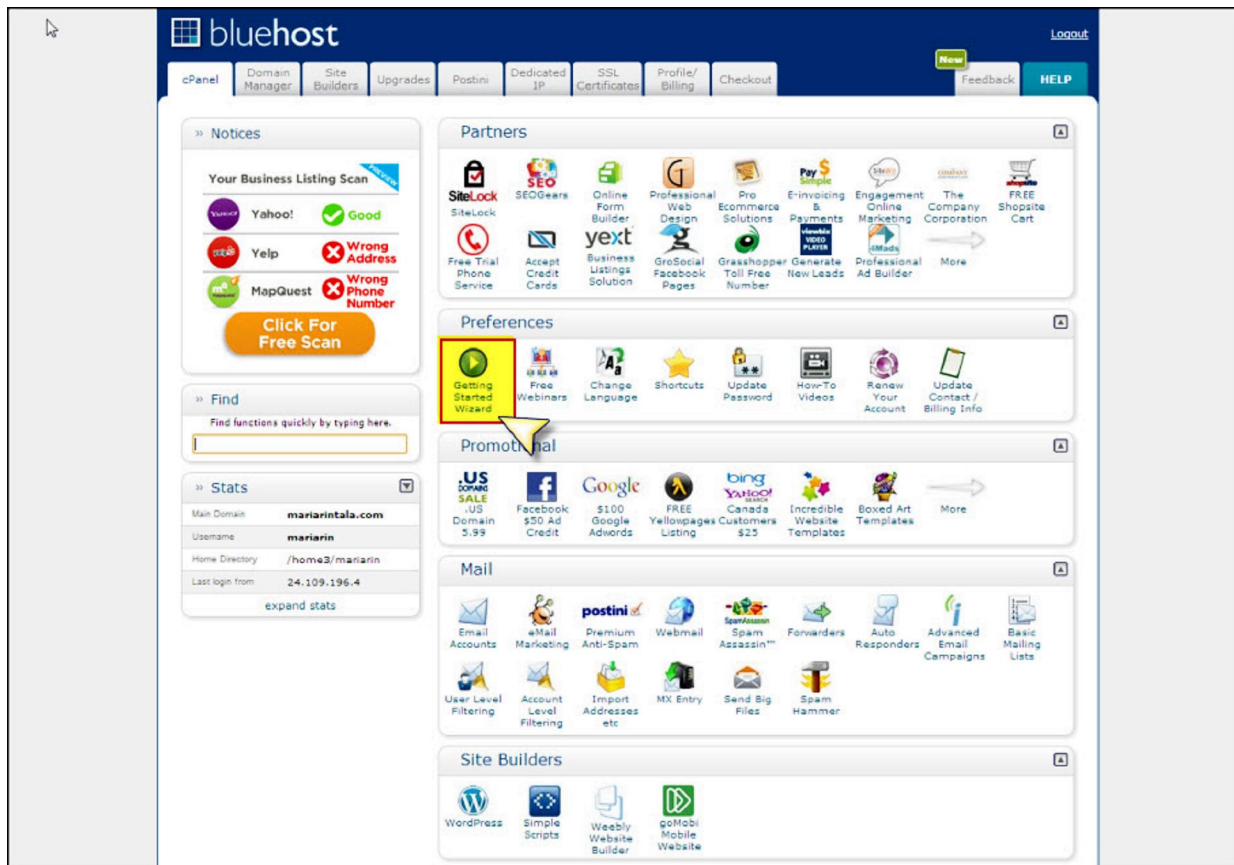

Those used to Fantastico are going to want to over-complicate things when changing over to a company that uses *Simple Scripts*. Don't do it! It really is a simple process as well as but not if you start

Getting Started with WordPress

trying to dot every ð and cross every ð. If you're into micro-controlling every step, stick with Fantastico: If, on the other hand, you want simple ðne-clickð processes, Simple Scripts will probably suit you better.

Sign up is easy, and you'll find yourself looking at your cPanel in no time at all. This is what it will look like. If a popup doesn't appear, you can access the introductory ðGetting Startedð wizard (under ðPreferencesð) for **tutorials**, **demos** and **videos**. For example, if you want to see how easy it is to set up a new email account ó something that traditionally has been known to give even seasoned bloggers nightmares ó watch the BlueHost video in the ðGetting Startedð wizard.

Do NOT watch the video for installing WordPress, however: If you follow the instructions, you may end up with the following error message:

Getting Started with WordPress

If this happens, you have two choices:

1. Contact Tech Support and ask them to fix it for you and set up your blog. (They will: And all you will have to do is make note of the log-in information and password, log in, and proceed straight to "Section Three: Customizing your Blog", skimming over the next few pages.)
2. If you prefer more control, or want to know what to do the next time you want to add a blog, simply follow the instructions below. (Yes. In spite of the error message.)

The following method has worked for me every time – even after I have asked Tech Support to "nuke" my account and bring it back to brand-new, empty status.

Section Two: How to Install Simple Scripts and Quickly Set Up WordPress

1. Find the "Site Builders" tab and select the WordPress icon.

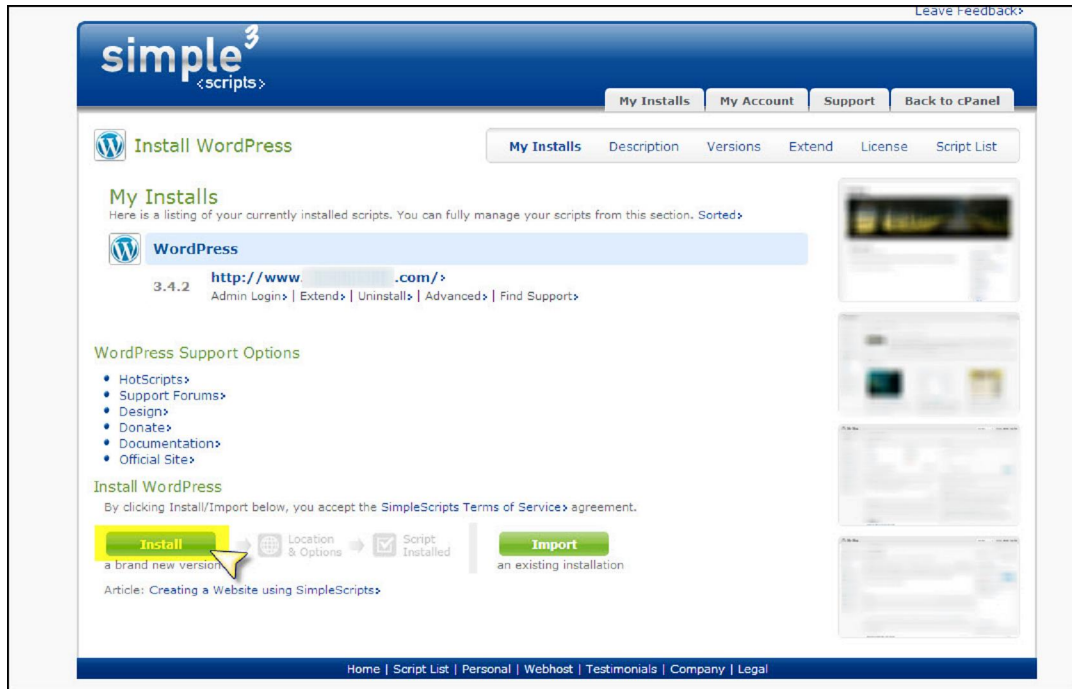

2. The Simple Scripts page will open up. Find the "Blogs" section and select "WordPress"

3. The "Install WordPress" window will open. Click on the "Install" button.

Getting Started with WordPress

A new page will open up, and you will see your WordPress site being built.

As soon as the Site URL and Login URL for your blog appears, even if it still says ðIn Progressö, you can (a) copy-paste your auto-generated password and (b) click on your Login URL to access your new blog.

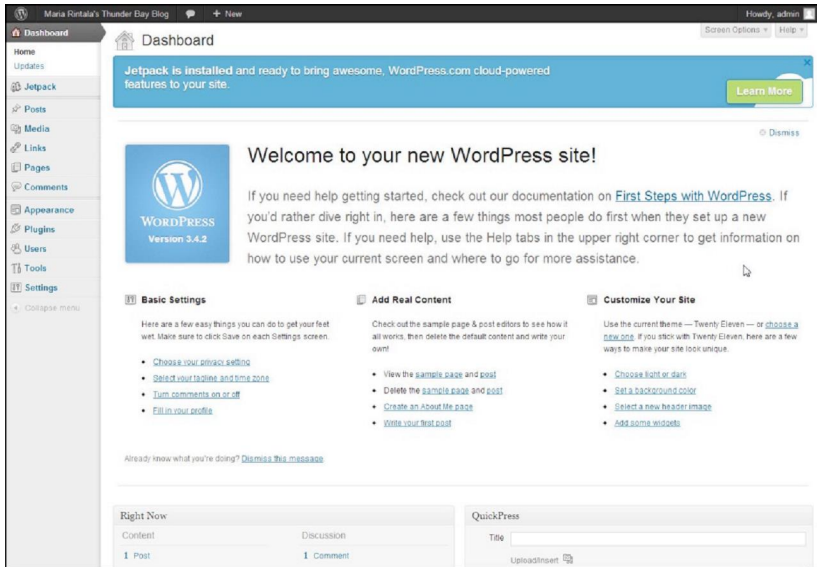

4. Enter ðadminö under ðUsernameö and paste your Password into the ðPasswordö field. Click the blue ðLog Inö button:

Getting Started with WordPress

5. You should then see your new dashboard. Ignore all the stuff under the "Welcome" message.

We are only going to use your left-hand, vertical Dashboard controls.

We are going to go through only the tabs where you need to customize data for maximum searchability. First, let's take care of your "Settings" section.

Getting Started with WordPress

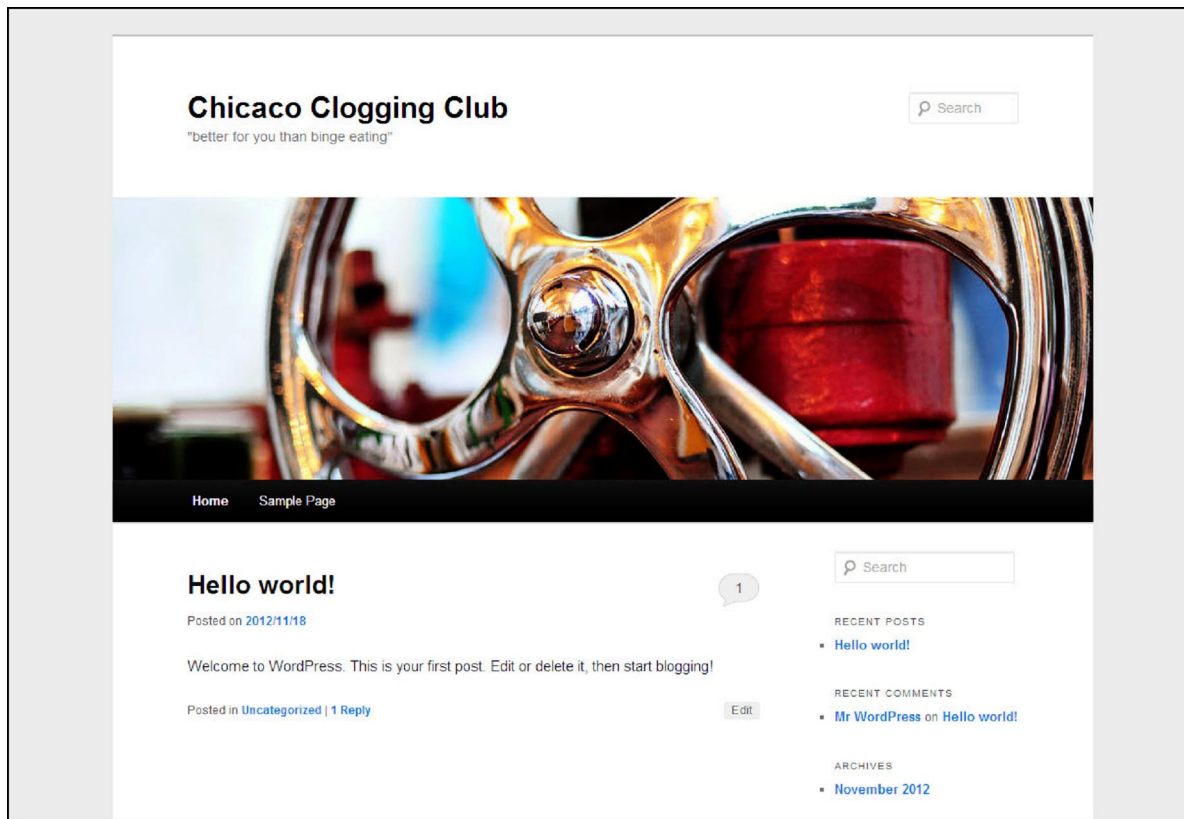

Settings>>General

Select **General Settings** from the drop-down list that appears. Now is when you can change your site or blog **Title**, if you wish.

Select your **Tagline** or your motto, slogan or a short description of what readers can expect.

(What you input in your Site Title and Tagline is what your readers will see. Like this!)

All of your other default settings in **General Settings** should be as you want them, except for **Timezone**. (You will want to change your UTC code.)

Getting Started with WordPress

If you don't know your UTC code, simply press the drop-down button and select your city from the (alphabetical) drop-down list that will appear. Select it, and your correct UTC code will also be selected (but it won't appear until after you've Saved and refreshed).

If you wish, you can also change the way you want the date to appear in your posts from five separate formats

When you're done altering your general settings, press the blue 'Save Changes' button

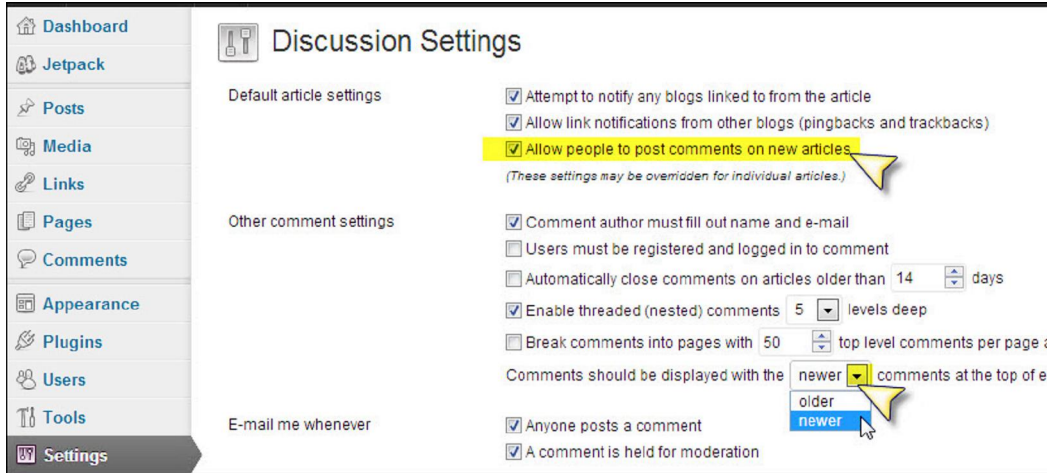

Settings>>Discussion

Close 'General Settings'. Go back to your 'Settings' tab and select 'Discussion'.

When your 'Discussion' page opens, all you need to do there is click on **Turn comments on or off** to toggle this setting to your preference.

Getting Started with WordPress

BlueHost has excellent SEO defaults, which you may not wish to change: However, as you can see, it's easy to do so, if you wish. The default is to allow people to comment ó simply uncheck it if you want no comments at all.

The only other recommended change: **Put "Newer" comments at the top rather than "Older"** (this is what people expect).

Slide on down to Avatars to set your preferences. I would recommend Gravatars, if you want peoples' Profile photos to appear; or else Mystery Man. (Don't bother with the cutesy Wavatars, etc., unless your audience is under twenty.)

Save your changes!

Fill in your profile. The only two sections you'd want to pay attention to:

1. Display name publicly ó the name you want your public to see.

If you don't want admin to appear, select your preferred name from the drop-down list. (N.B.: This **will not** change your admin username in your log-in box!)

2. About Yourself -- Fill in short biographical details that you think *would most interest your readers*. (Be sure to include keywords you'd like people to find you with.)

Getting Started with WordPress

About Yourself

Biographical Info

Trying to escape the stresses of life in Chicago, I turned to binge eating -- and gained weight. (BIG surprise.) Then I discovered clogging -- and not only did I lose weight, I ended up in the best shape I've ever been, mentally and physically. Lasting friendships, energy -- and FUN. And that's why I created the Chicago Clogging Club

Share a little biographical information to fill out your profile. This may be shown publicly.

Press "Update Profile" to save.

Settings >> Writing

The "Writing" tab has only one modification you need to make. Slide right down to the bottom of that section and find the Textarea box with the single, solitary, lonely little "pingomatic" ping-back link:

Update Services

When you publish a new post, WordPress automatically notifies the following site update services. For more about this, see [Update Services breaks](#).

<http://rpc.pingomatic.com/>

Save Changes

Copy-paste the following list, and add after "http://rpc.pingomatic.com/":

Press "Save Changes".

Plugins

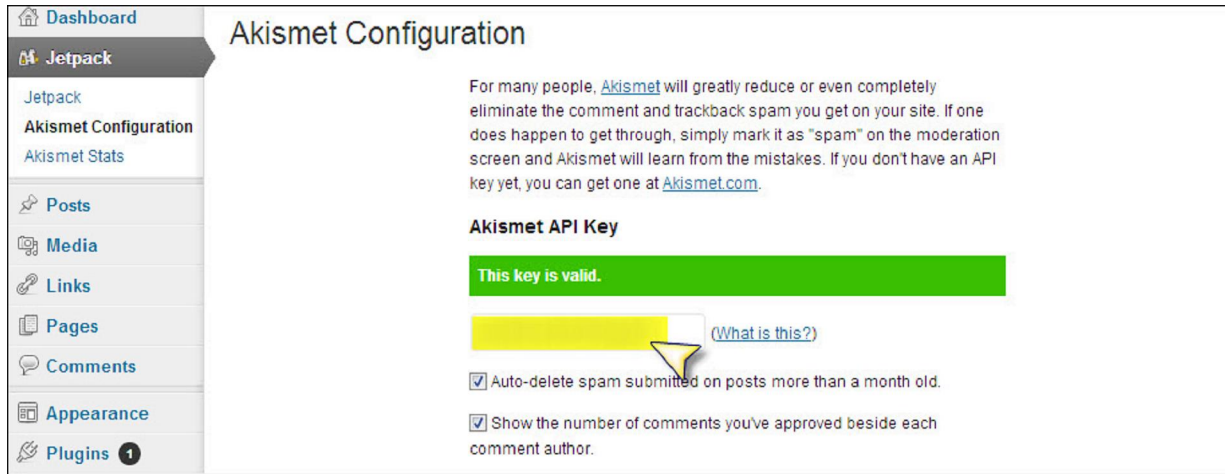

Next, go to your Plugins tab in your left-hand, vertical menu. The only already-installed plugin that you absolutely MUST activate is Akismet, your spam filter.

If you already have an Akismet API key, click on "Activate", then click on "Enter your Akismet API key" and enter it in the Textarea box provided. (If you don't, click on "Sign up for an Akismet API key".)

Getting Started with WordPress

You'll be given the key & a serial number. In fact, it should already be populating the Textarea box when you Activate it:

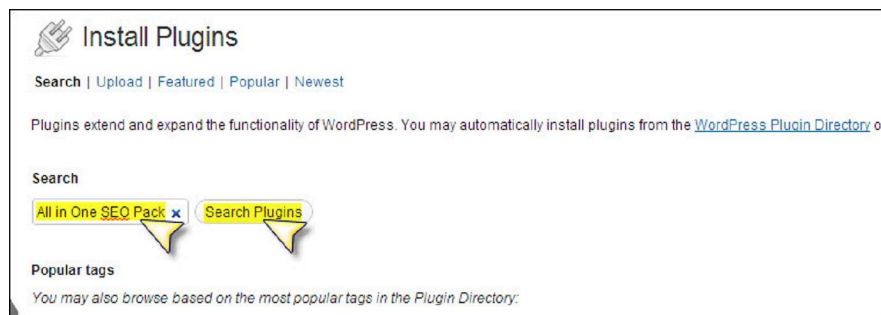

Don't add the mobile plugins until you've (later) customized your theme. Once you've got your theme looking the way you want, then you can return and add these mobile plugins, if you wish them activated. Meanwhile, don't overload your blog with plugins. Stick to the essentials. After Akismet, these are:

- All in One SEO Pack
- Google XML Sitemaps
- Theme Authenticity Checker (TAC)
- Sociable (or any other social bookmarking plugin you prefer)
- WP Security Scan

You can find each of these at WordPress.org in its 'Plugins' section & right from your Dashboard! Simply Go back to 'Plugins' and select the 'Add New' tab. Then enter the name of the plugin you wish to find into the Textarea box, and press 'Search plugins'.

A page will open up: Select your plugin from the choices presented.

Getting Started with WordPress

Select "Install Now". A page will open up, letting you know if the Install was successful. Click on "Activate Plugin".

Note: That's all there is to it for some plugins. Others will have a "Settings" link or present you with a message such as this one:

Click on the link provided and configure or input settings as instructed. This usually includes:

- Sliding over any advertising to click on "Enable" or "Activate" buttons
- Entering Titles, Descriptions, Summaries as instructed
- Entering hard data requested, such as your Google Analytics ID

Once you are satisfied with your plugins, it's time to change your blog's appearance from the default theme to a custom theme that best befits your needs.

Make sure you Save by pressing "Update Options".

Appearance

Getting Started with WordPress

To change your Theme, go to the Appearance tab in the left-hand, vertical menu and press it. A selection of three basic themes will open up. You can find more themes at the [WordPress.org Themes](#) section, or you can purchase a paid Premium Theme such as the highly flexible and easy [Socrates](#) theme; but whatever you do, be very careful of indiscriminately downloading and trying free themes from randomly-Google'd sites. Many of these are laced with hidden code that will undermine or even harm your site.

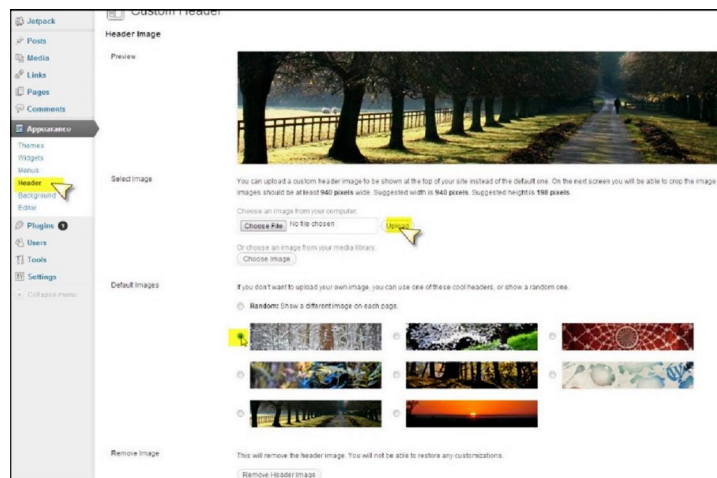

Let's start the **SmallBiz** theme offered in your Appearances screen. A full-screen page will open up, showing you how your blog will look (without your personal data – this is just a Layout example).

If you like it, select "Save & Activate":

The next page that opens up allows you to thoroughly customize your new SmallBiz theme, as well as watch a video explaining its features. Don't do this part unless you have some time to go through all the settings and features. It will likely take a little time to tweak your settings, text and colors until you've got them the way you like them – until then, the sample text displays.

And if you're anxious to get started blogging, simply stay with (or go back to and re-activate) the **Twenty Ten** theme or **Twenty Eleven** for now: You can start adding posts right away – and search for the theme of your choice later. (Note that even these basic themes allow you to perform actions like upload a custom Header or pick a new one from the Appearance's drop-down menu.)

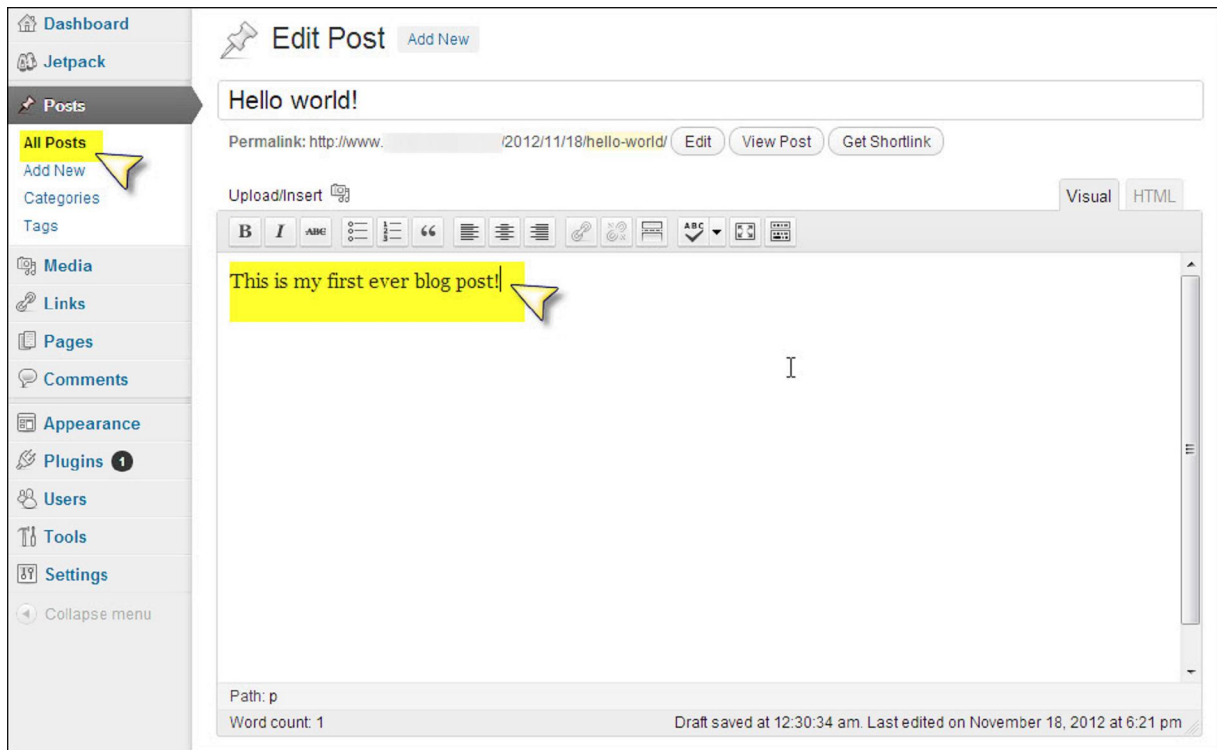

Section Three: Getting to Know Your Blog

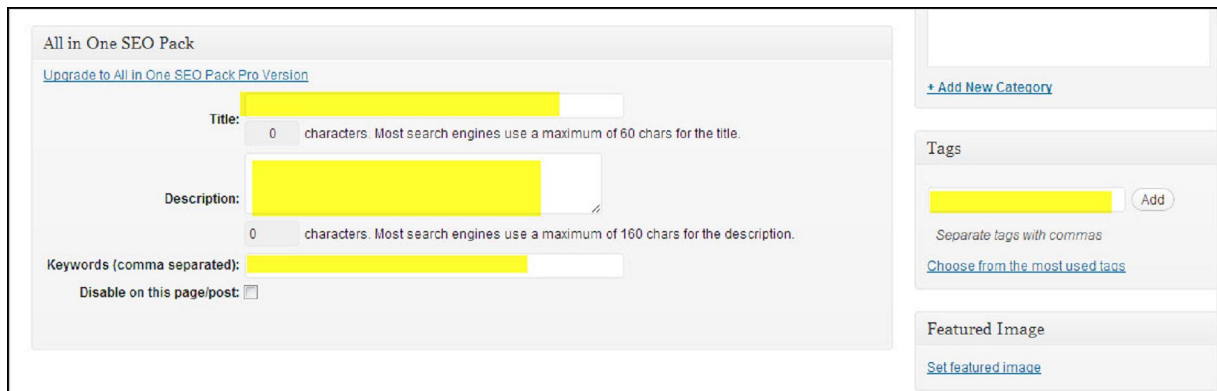

The first thing you'll want to do is add a post (and change any default post, if there is one). Go to your left-hand, vertical menu and select "Posts >> All Posts".

Getting Started with WordPress

The default "Hello World" post will open up. Replace the Title with your own and the text with your own.

Remember to slide down to your All in one SEO boxes and fill in your blog post Title, Description (less than 160 characters) and Keywords as well as any Tags you want to flag the article with. This will help your post's searchability greatly.

Finally, press the blue "Update" button on the top, right-hand side of the page.

And that's the basic process in setting up a WordPress blog (except for selecting "Add New" next time in "Posts", rather than "All Posts").

Getting Started with WordPress

Editing Your HTML URLs

Another thing you may want to do: Edit your post URLs for more searchability. It's a very simple process – just press the "Edit" button and write in your new page URL, exactly as you'd like it to appear.

Before:

After:

(Remember to press the "OK" button when you're finished.)

Adding Images

Photographs and graphics give your posts (and blog) massively more searchability and eye appeal – so do get into the habit of inserting at least one, per post.

The best idea for image sources: Take your own photographs. Failing that, only use photographs in the public domain (with public domain licensing) or ask permission to use photos.

(Government websites and Wikipedia are often a great source of public domain photographs: Do still check the licensing, however – sometimes government photos do have licensing restrictions.)

Pressing the "Add Media" button will open up a popup allowing you to add photos from your blog library (once you have one), your computer or from another URL, if you have a photo parked on another site. (Do NOT use the latter option if you don't own the site or if you're not directly invited to do so: You might end up inadvertently "stealing" bandwidth from the site owner.)

View your post from the edit buttons, or else from the "View Site" at the top left corner of your Dashboard.

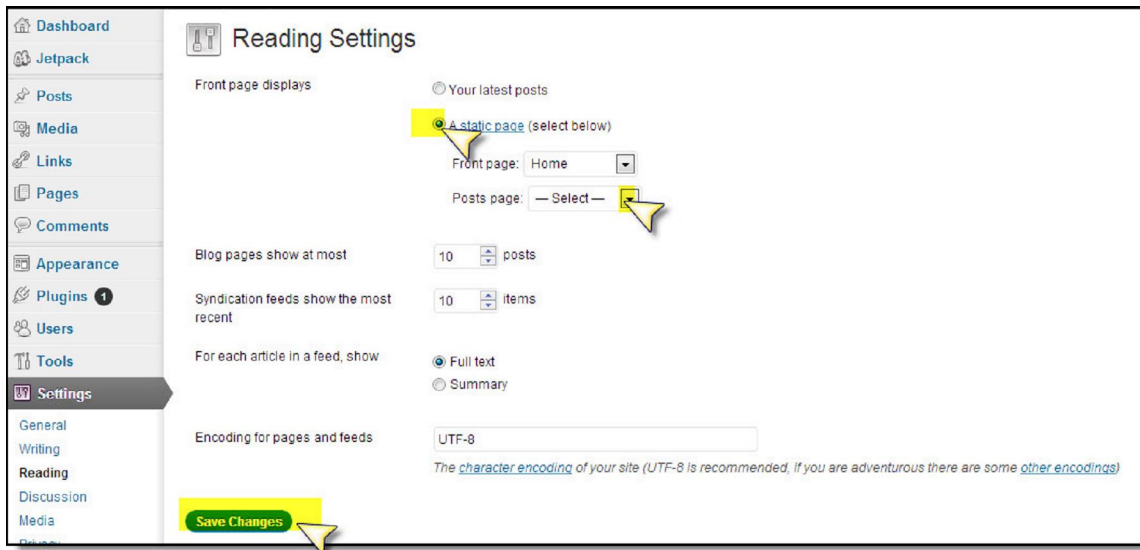

Getting Started with WordPress

Static Page or Latest Post?

But ó whoops! Why does your first page not show the post?

Go to óSettings>>Readingö and change öFront page displaysö option from öA static pageö to öYour latest postsö by pressing the radio button.

If youöd rather make your first post into a static page (a öHomeö page all visitors will see every time they visit your site) keep öA static pageö selected, and select the correct post from the drop-down menu

Be sure to öSave Changesö, of course.

Your Comments Section

Your final action for the day: Click on öCommentsö in the left-hand vertical menu and delete the öDefaultö test comment.

öVisitö your post or site, and make sure everything looks the way youöd like it to.

Getting Started with WordPress

There is, of course, a lot more to learn ó such as pre-scheduling posts, adding more plugins, tweaking your CSS, adding audio or video plugins, and more ó but get comfortable with blogging and make some posts first, rather than trying to jump from WordPress beginner to expert all in one day.

Happy blogging!

BlueHost vs. HostGator.

Blue Host offers Simple Scripts. HostGator has their own 1 step install. Either is fine. Our instruction videos are geared to hostgator. BUT THIS MANUAL is geared to Blue Host which offers Simple Scripts.

Once you have completed this manual OR the videos in Week Zero, none of this will be important in any way.

Either of the quick installs with either company is fine and fast.

Using this manual with BlueHost should put you online in about 90 minutes. The videos in Week Zero will probably help you be up in about 3 hours.

If I were starting today I would use Blue Host and this manual.

IF ANYTHING goes wrong get tech support online or switch to hostgator and do their quick install.

Once you have completed this manual you are at the same point as those who used the videos to get their blog up.

You are done with this project for Week Zero.
