

Should We Stop Flying?

Flying is lousy for the planet.

- Don't fly when there is an **alternative** (rail, bus, fuel-efficient full car). Other transport methods often take a similar amount of time (and you get to enjoy the scenery)
- Don't fly budget airlines - they're not greener, and **cheap holidays** are not cheap for the planet
- Don't fly **short haul**
- Don't fly **at night**
- Don't fly in **Winter**
- **Carbon offsetting** is good, but only when there is no alternative to flying

Do fly if your trip brings **tangible benefits** to the destination, if you can make a significant difference to conservation and to local communities. And carbon offset your trip.
